When starting a family
takes more than two

Satellite Symposium

Preliminary Program

When starting a family takes more than two

Program Description

This year the Merck Serono Symposium will explore some of the medical, social and ethical challenges that emerge when prospective parents have to rely on others to have a baby.

The Symposium has been thoughtfully put together with prominent speakers looking at issues surrounding donor sperm, donor oocytes, same sex couples, surrogacy, and reproductive tourism. Promising new technologies such as uterine and ovarian transplantation and germ cell repopulation of the testis will be covered; as will some of the ethical issues surrounding surrogacy, donor and same-sex families.

Learning Objectives

1. Gain a better understanding of the ethical issues involved in gamete donation.
2. Evaluate the welfare of donor children
3. Learn about promising surgical alternatives to classical gamete donation and surrogacy
4. Understand the challenges posed by cross-border reproduction and declining population fertility

Target Audience

IVF Clinicians, IVF Scientists, IVF nurses and IVF Counsellors involved in the treatment of reproductive disorders.

This meeting is a satellite symposium to the Fertility Society of Australia's 30th Annual Scientific Meeting, which is held in conjunction with the 14th World Congress on Human Reproduction. Details can be found at www.humanreproduction2011.com

Preliminary Scientific Program Wednesday 30 November 2011 Melbourne Australia
